RAY click® - 3 easy steps to digital accessibility.

The blind and visually impaired can finally enjoy greater independence, spontaneity and accessibility to all the valuable features services sighted users have come to enjoy.

Ray Click technology is the only solution that enables you to transform any smartphone and/or touch-enabled device into a tactile-powered tool. So, you have a sight-free interface, easy to understand operation, and intuitive access to the exciting world of digital applications, online services, and social media.

Project Ray offers the world’s only smartphone solutions developed especially for seniors, the vision-impaired and others with print disabilities. From its unique operating principle, eyes-free interaction paired with a simple-to-use interface; to specialized built-in apps, content and remote support services.

RAYclick®

Ray Click a four button, tactile sticker that uses NFC radio to communicate with an attached smartphone or other mobile device.

With Ray Vision® app running on any Android-based mobile, users can fully navigate and control the smartphones and tablets by pressing using familiar, physical buttons.

The buttons can be configured for a wide range of actions. A combination of 2 stickers—to search up and down in a list; choose; and go-back—is enough to enable full control of any of

Features and Capabilities.
