Ray L5® - The smart & easy mobile phone.

The Ray L5 smartphone is specially designed to ensure easy migration from a basic, feature phone into the smartphone era. Ray L5 provides the best of both worlds—a basic feature phone with a physical keypad, tactile interface, and quick access buttons; and a fully functional smartphone, touch-enabled screen, and a treasure-trove of optional apps running on the Android 5.1 operating system. It’s the one device that never disappoints individual people who find it difficult to use touch-based smartphones and tablets.

Project Ray offers the world’s only smartphone solutions developed especially for seniors, the vision-impaired and others with print disabilities. From its unique operating principle, eyes-free interaction paired with a simple-to-use interface; to specialized built-in apps, content and remote support services.
